

ACCENT TATTOO & PIERCING STUDIO INC.

How Your Piercing Heals and Looks is Up To You!

Congratulations, you just received a body piercing by a trained professional who cleaned the area to be pierced, used sterile needles and piercing instruments, and the finest implant grade jewelry. Now it is UP TO YOU to take appropriate care of your piercing during the critical healing period.

- The most important thing to remember in healing an oral piercing is to leave it alone! Try not to play with it or move it around excessively.
- **Please refrain from oral activities with others for at least two weeks.**
- **We suggest that you refrain from drinking alcohol for 24 hours.**
- **We also suggest that you refrain from smoking or using a straw for at least two weeks.**
- **Ice** is probably the biggest help in the minimization of swelling and discomfort. Just let the ice sit on the fresh piercing. **DO NOT SUCK ON IT.**

If you regularly use mouthwash, it is important not to overdo it. Dilute with water and use it no more than twice per day.

If your downsized piece of jewelry is purchased anywhere other than Accent Tattoo & Piercing, we cannot guarantee your piercing. The reasons for this are simple: we cannot be responsible for an unknown quality of jewelry, jewelry that is not sterile, or improperly fitted jewelry. In the worst cases this may lead to toxic metals being absorbed into your body, improperly fitted jewelry may cause tooth and gum damage, and if not sterile, possible infection. At Accent Tattoo & Piercing we will fit you with the proper size jewelry and we only use the highest quality implant grade stainless steel.
